Lanlang[®] TC008B

Black color high capacity gel type strong acid cation exchange resin

Used for water softening and demineralization

Lanlang[®] TC008 B is a premium grade gel type strong acid cation exchange resin produced by sulfonated styrene-divinylbenzene (DVB) copolymers in standard Gaussian size distribution. Its dark color makes it convenient to be separated from anion resin in mixed bed. It has excellent chemical, physical and thermal stability, and high exchange capacity. TC008 B in sodium form is widely used for water softening to reduce total hardness. In hydrogen form, it also can be used for water demineralization.
